

WE ARE YOUR AUTOMATIC LUBRICATION SOLUTION FOR HYDRAULIC HAMMERS

Lube it or Lose it!

DROPSA BRAVO

- ♦ Monitored to supply hammer system with a calculated amount of lubricant (others on the market don't)
- ♦ Low level standard with warning light, also can be wired to disable hammer with alarm fault
- ♦ 15 Month product warranty, with 24 month workmanship coverage
- ♦ IP69K pump creates pressures up to 4500psi

**Stop costly downtime and equipment failure,
start lubricating automatically today!**

AUTOMATIC LUBE SYSTEMS OFFERS..

A feature rich Lubrication System designed to prevent premature wear on hydraulic hammers. Lack of lubrication is often the cause of damage to this application. Using an IP69k rated pump, mounted on the machine, we route heavy duty hydraulic line to the hammer. We Utilize a quick disconnect to keep the hammer easily removable from the equipment.

The pump sends the a precise amount of lubricant to the hammer calculated by how many times the activation switch for the hammer is pushed. This gives your equipment the right amount of grease when it needs it most- **during operation**. Unlike other Lubrication systems that simply "dump" grease into the hammer while it's operating. ALS's systems precisely monitor both lubrication delivery and reservoir level.

Our system utilizes a warning light in the cab that alerts the operator to faults when they happen. So if the system runs out of grease or is not pumping grease, you know! Better yet we offer an option to shut the hammer down automatically when a failure is detected.
